

I want to streamline my legal department

We offer you a comprehensive platform for the management of your M&A ancillary documents.

Why it matters

Private equity firms are often leanly staffed on the legal side and retain law firms for deal-related work. But not all deal work is equally complex and the hourly rates charged by legal advisors can be disproportionate for everyday tasks. Task management and artificial intelligence software can take over some of the heavy lifting and thereby help streamline processes and cut costs.

How we can help

- Our platform has been developed in close collaboration with some of the world's leading private equity firms to:
 - Streamline the collection, archiving and management of transaction records
 - Extract key legal and commercial terms and visualizing them in the form of presentations and spreadsheets
 - Manage precedents
 - Monitor counsel's performance
 - Automatically markup and score NDAs and other routine M&A ancillary documents

- As a software vendor who operates mission-critical processes for the world's leading banks and private equity firms, we are deeply familiar with the high expectations corporates have when it comes to mission-critical IT infrastructure.
- We operate a **highly available, scalable and secure IT infrastructure**, comprising a secure private cloud distributed across two London-based data centers run in an active/active dual-data center configuration.
- Our data center has **ISO 27001, 14001 and 9001** certifications. In addition, we hold a **Cyber Essentials Plus** certification from the U.K. government and commission annual third-party penetration tests, the results of which we share with our partners.
- We support a range of **enterprise features**, including IPS, WAF, rate limiting, centralized log collection, aggregation and inspection, a comprehensive DLP program, OAuth2/SAML SSO (IDP initiated flow) authentication, MFA and a role-based access model.

Focus on availability, scalability and security
