

I evaluate vendors from a risk management perspective

We have been in business for eleven years and are deeply familiar with the high expectations global banks have when it comes to mission-critical IT infrastructure.

Why it matters

As financial services firms become increasingly reliant on technology, information security risks emerge. Connecting to third party vendors makes firms more vulnerable to cyber attacks in the absence of a robust security infrastructure. Our solution ensures that you remain protected while receiving access to efficiency-enhancing technology.

How we can help

- We operate a **highly available, scalable and secure IT infrastructure**, comprising a secure private cloud distributed across two London-based data centers run in an active/active dual-data center configuration.
- Our data center has **ISO 27001, 14001 and 9001** certifications. In addition, we hold a **Cyber Essentials Plus** certification from the U.K. government and commission annual third-party penetration tests, the results of which we share with our partners.
- We support a range of **enterprise features**, including IPS, WAF, rate limiting, centralized log collection, aggregation and inspection, a comprehensive DLP program, OAuth2/SAML SSO (IDP initiated flow) authentication, MFA and a role-based access model.
- Our **CIO** would be happy to discuss our information security setup and your requirements with you further.
- By working with WSD, you gain access to **a modern stack of fully documented REST API-based microservices** that cover all aspects of the structured products issuance process, including workflow, document creation, approval and dissemination, listings and SEC filings. Our APIs come with a low-code web IDE that allows your team to combine these APIs to quickly build applications.

- In addition, our service model includes a **managed service component** for document template creation and maintenance. All of our services are available on a metered basis through a marketplace that allows you to quickly scale and reduce consumption based on your business needs.

**A financially strong
partner with a deep
commitment to
information security**
