

PRIIP Cloud

The EU PRIIPs Regulation requires structured products manufacturers to produce a Key Information Document (KID) for each product that they offer to retail investors. The KIDs must contain risk numbers, which need to be updated daily, and be prepared in the investor's language of choice. We offer a front-to-back KIDs solution backed by Tier 1 manufacturers, which supports thousands of payoff variations in 19 languages and integrated risk calculations.

Our solution

- High-performance KID engine covering both document creation and risk calculations (500,000+ ISINs per day)
- Market-standard PRIIP KID templates
- Support for thousands of payoff variations across structured products and OTC derivatives
- Automatic data feeds into RegXchange for dissemination of documents and metadata to distributors and data vendors
- Platform development guided by the PRIIP Cloud consortium, which includes ten Tier 1 manufacturers and meets weekly
- Manual KID drafting, risk calculation and translation service on request

Step 1: Data

You provide data in XML-format or input into the UI (Trade Form).

Step 2: Template

The system produces a KID template that can be translated and/or goes through the QLAB risk engine to run through performance scenarios and SRI calculations.

Step 3: Document

A document is created.

Benefits

Time savings

Backed by Tier 1 banks

- Gain access to industry-standard templates
- Discuss latest regulatory developments with peers

Comprehensive product coverage

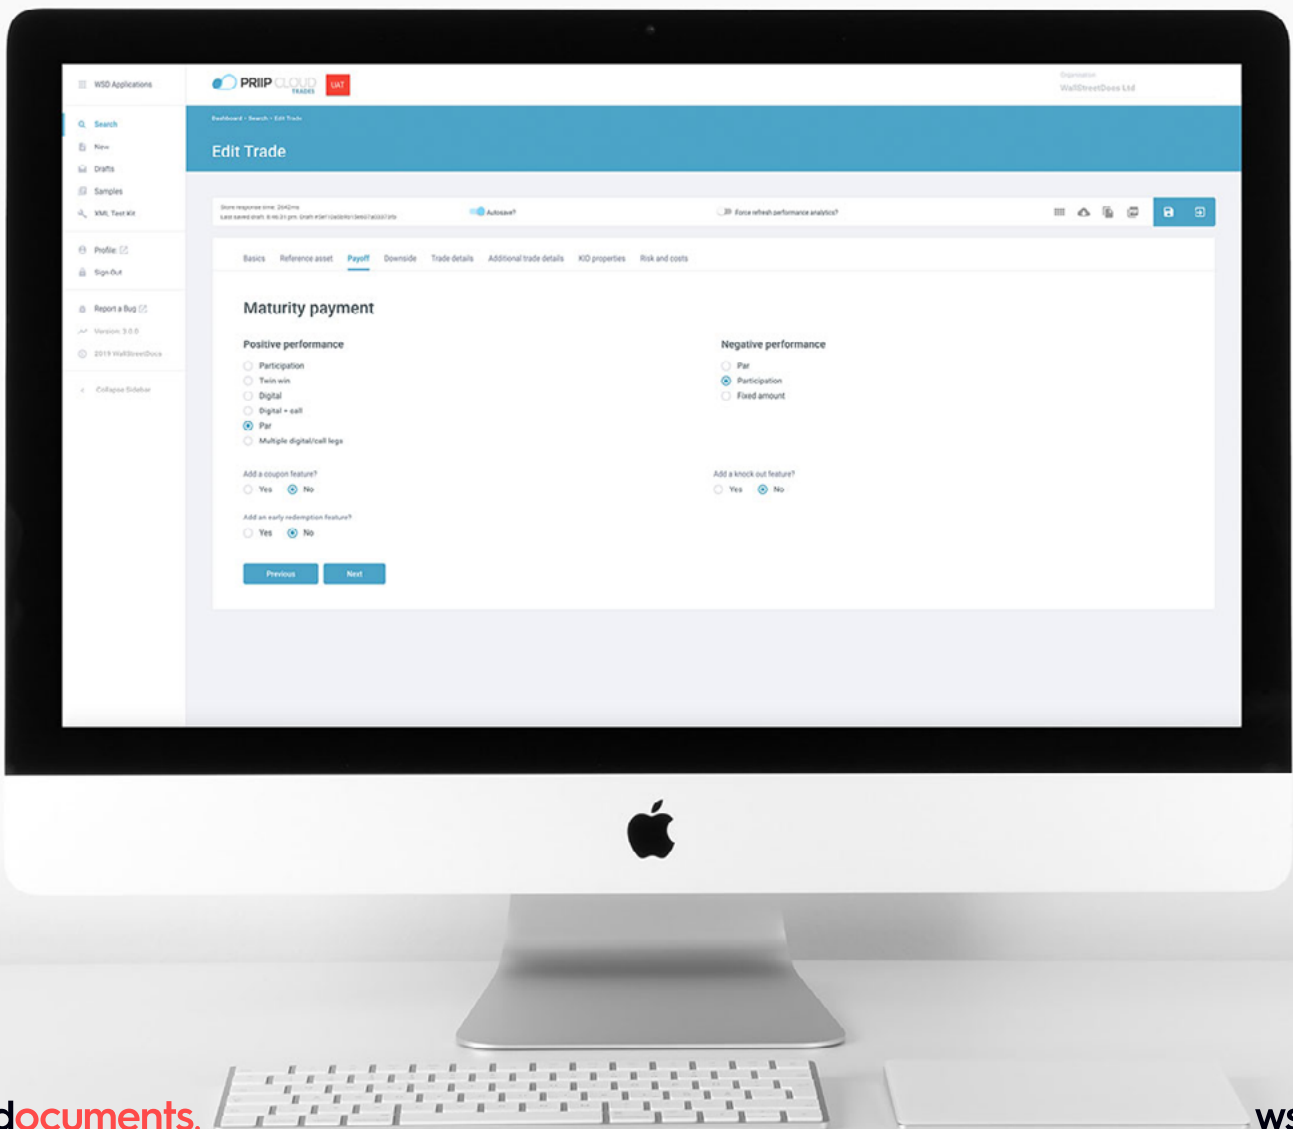

- Create documents for structured products and OTC derivatives
- Access the largest available template tool

All European languages

- Benefit from pre-made translations of numerous product features
- Tap into a pool of expert translators

Risk engine

- Accelerate KID production through optimized risk calculations
- Reduce compliance risks
